

# Contents

<b>1</b>	<b>Introduction</b>	<b>13</b>
1.1	Elements of Linear Algebra . . . . .	13
1.1.1	Definitions . . . . .	13
1.1.2	Linear Independence and Related Concepts . . . . .	16
1.1.3	Solution of Linear Equations . . . . .	18
1.1.4	Solution of Eigenvalue Problem . . . . .	20
1.2	A Brief Introduction of MATLAB . . . . .	24
1.3	Types of Matrices . . . . .	30
1.3.1	Square vs. Non-square Matrices . . . . .	30
1.3.2	symmetric vs. Non-symmetric Matrices . . . . .	30
1.3.3	Full Rank vs. Deficient Rank Matrices . . . . .	30
1.3.4	Singular vs. Non-singular Matrices . . . . .	31
1.3.5	Orthogonal vs. Non-orthogonal Matrices . . . . .	32
1.3.6	Defective vs. Non-defective Matrices . . . . .	33
1.3.7	Positive (semi-)Definite vs. Positive Indefinite Matrices . . . . .	35
1.3.8	Zero Structured vs. Full Matrices . . . . .	35
1.4	Overview of Matrix Computations . . . . .	41
1.5	Reordering of Sparse Matrices . . . . .	50
1.6	Utility Codes . . . . .	54
<b>2</b>	<b>Matrix Decomposition by Non-orthogonal Transformation</b>	<b>65</b>
2.1	Gauss Elimination Matrix . . . . .	66
2.2	LU Decomposition . . . . .	68
2.2.1	LU Decomposition by Gauss Elimination . . . . .	69
2.2.2	LU Decomposition by Crout Procedure . . . . .	71
2.2.3	Driver of LU Decomposition . . . . .	73
2.2.4	LU Decomposition of a Upper Hessenberg Matrix . . . . .	77
2.2.5	LU Decomposition of a Band Matrix . . . . .	78
2.3	LDU Decomposition . . . . .	79
2.3.1	LDU Decomposition by Gauss Elimination . . . . .	80
2.3.2	LDU Decomposition by Crout Procedure . . . . .	81
2.3.3	Driver of LDU Decomposition . . . . .	83
2.4	Congruent Decomposition Algorithms for symmetric Matrices . . . . .	85
2.4.1	Reduction of symmetric Matrix to Diagonal (LDLt) . . . . .	85
2.4.2	Cholesky Decomposition (LLt) . . . . .	89
2.4.3	Reduction of symmetric Matrix to Tri-diagonal (LTLt) . . . . .	91
2.4.4	Reduction of symmetric Matrix to Block Diagonal (LBLt) . . . . .	97
2.4.5	Modified Cholesky Decomposition (xLLt) . . . . .	100
2.5	Similarity Decomposition Algorithms . . . . .	104
2.5.1	Reduction of Square Matrix to Hessenberg by Gauss Elimination . . . . .	104
2.5.2	Reduction of Square Matrix to Tri-diagonal by Gauss Elimination . . . . .	107
2.5.3	Reduction of Square Matrix to Tri-diagonal by Lanczos Procedure . . . . .	110

2.6	Simultaneous Reductions of Two Matrices: GTJGt . . . . .	114
2.6.1	Hyper Rotation and Hyper Reflection . . . . .	114
2.6.2	GTJGt decomposition by Hyperbolic Rotation or Hyperbolic Reflection . . . . .	119
<b>3</b>	<b>Matrix Decomposition by Orthogonal Transformation</b>	<b>127</b>
3.1	Householder Reflection Matrix and Givens Rotation Matrix . . . . .	127
3.2	QR Decomposition . . . . .	130
3.2.1	QR Decomposition by Householder Reflections . . . . .	130
3.2.2	QR Decomposition by Givens Rotations . . . . .	131
3.2.3	QR Decomposition by Gram-Schimdt Orthogonalizations . . . . .	132
3.2.4	Driver of QR Decomposition . . . . .	134
3.2.5	QR Decomposition of a Upper Hessenberg Matrix . . . . .	137
3.2.6	QR Decomposition of a Band Matrix . . . . .	139
3.3	Complete Orthogonal Decomposition (QLZ) . . . . .	140
3.4	Reduction of Matrix to Bi-diagonal . . . . .	142
3.4.1	QBZ Decomposition by Householder Reflections . . . . .	142
3.4.2	QBZ Decomposition by Givens Rotations . . . . .	145
3.4.3	QBZ Decomposition by Golub-Kahan-Lanczos Procedure . . . . .	147
3.5	Reduction of Square Matrix to Hessenberg . . . . .	151
3.5.1	QHQt Decomposition by Householder Reflections . . . . .	151
3.5.2	QHQt Decomposition by Givens Rotations . . . . .	153
3.5.3	QHQt Decomposition by Arnoldi Procedure . . . . .	155
3.6	Reduction of Symmetric Matrix to Tri-diagonal . . . . .	157
3.6.1	QTQt Decomposition by Householder Reflections . . . . .	158
3.6.2	QTQt Decomposition by Givens Rotations . . . . .	159
3.6.3	QTQt Decomposition by Lanczos Procedure . . . . .	160
3.7	Simultaneous Reductions of Two Matrices: QHRZ . . . . .	163
3.7.1	QHRZ decomposition by Orthogonal Transformations . . . . .	163
3.7.2	QHRZ decomposition by Arnoldi Procedure . . . . .	166
<b>4</b>	<b>Direct Algorithms of Solution of Linear Equations</b>	<b>169</b>
4.1	Brief Introduction of Pseudo Inverse . . . . .	170
4.2	Linear Constraints to Linear Equations . . . . .	172
4.2.1	When $\mathbf{A}$ is a rectangular matrix . . . . .	173
4.2.2	When $\mathbf{A}$ is a square matrix . . . . .	174
4.2.3	When $\mathbf{Bx} = \mathbf{b}$ has no solution . . . . .	178
4.3	Solution of Five elementary Linear Equations . . . . .	180
4.3.1	Linear Equations of a Zero Matrix: $\mathbf{Ox} = \mathbf{b}$ . . . . .	180
4.3.2	Linear Equations of a Diagonal Matrix: $\mathbf{Dx} = \mathbf{b}$ . . . . .	180
4.3.3	Linear Equations of an Orthogonal Matrix: $\mathbf{Qx} = \mathbf{b}$ . . . . .	181
4.3.4	Linear Equations of a Lower Triangular Matrix: $\mathbf{Lx} = \mathbf{b}$ . . . . .	182
4.3.5	Linear Equations of an Upper Triangular Matrix: $\mathbf{Ux} = \mathbf{b}$ . . . . .	183
4.4	Gauss and Gauss-Jordan Elimination Algorithms . . . . .	186
4.5	Householder and Givens Elimination Algorithms . . . . .	193
4.6	Solution Algorithms based on Matrix Decompositions . . . . .	196
4.7	Linear Systems Arising from Interpolation . . . . .	201
4.7.1	Introducing Function Interpolation . . . . .	201
4.7.2	Polynomial Interpolation . . . . .	202
4.7.3	Trigonometric Interpolation . . . . .	207

<b>5 Iterative Algorithms of Solution of Linear Equations</b>	<b>217</b>
5.1 Overview of Iterative Algorithms . . . . .	218
5.2 Stationary Iterations: Jacobi, Gauss-Seidel and more . . . . .	219
5.3 General Methodology of Non-stationary Iterations . . . . .	226
5.4 Non-stationary Iterations Applied to Symmetric Matrix . . . . .	228
5.4.1 Conjugate Gradient . . . . .	228
5.4.2 Conjugate Residual . . . . .	230
5.4.3 Conjugate' Error . . . . .	233
5.4.4 Numerical Examples for CG,CR and CE . . . . .	234
5.5 Non-stationary Iterations Applied to Unsymmetric Matrix . . . . .	239
5.5.1 Full Orthogonalization Method . . . . .	239
5.5.2 Generalized Minimum RESidual . . . . .	240
5.5.3 Generalized Minimum Error . . . . .	241
5.5.4 Direct Incomplete Orthogonalization Method . . . . .	242
5.5.5 Direct Quasi Generalized Minimum Residual . . . . .	244
5.5.6 Direct Quasi Generalized Minimum Error . . . . .	246
5.5.7 Bi-Conjugate Gradient . . . . .	248
5.5.8 Quasi-Minimal Residual . . . . .	249
5.5.9 Quasi-Minimal Error . . . . .	251
5.5.10 Transposed Free Bi-Conjugate Gradient . . . . .	252
5.5.11 Transpose Free Quasi-Minimal Residual . . . . .	255
5.5.12 Numerical Examples . . . . .	256
5.6 Special Algorithms for Normal Equations . . . . .	257
5.6.1 Symmetrizing Transformations . . . . .	258
5.6.2 Stationary Iterations for Normal Equations . . . . .	259
5.6.3 Conjugate Gradient for Normal Equations . . . . .	263
5.6.4 Remarks on Iteration Algorithms for Constrained Linear Equations . . . . .	265
5.7 Other Important Topics . . . . .	266
5.7.1 Preconditioning Techniques . . . . .	266
5.7.2 Parallel Computations . . . . .	268
5.7.3 Algebraic Multigrid Method . . . . .	269
5.7.4 Domain Decomposition Method . . . . .	271
<b>6 Direct Algorithms of Solution of Eigenvalue Problem</b>	<b>277</b>
6.1 Algorithms of Solution of $2 \times 2$ Eigenvalue Problems . . . . .	278
6.2 Bound Estimation of Symmetric Eigenvalue Problems . . . . .	280
6.3 Jacobi Iterations for Symmetric Matrix . . . . .	284
6.4 Power Iterations and Subspace Iterations . . . . .	286
6.5 QR Iterations . . . . .	287
6.5.1 Reduce $\mathbf{A}$ to Hessenberg Form . . . . .	287
6.5.2 A QR Iteration Step for a Hessenberg Matrix . . . . .	288
6.5.3 Deflation . . . . .	289
6.5.4 Shift . . . . .	289
6.5.5 MATLAB Implementations of QR Iterations Algorithms . . . . .	292
6.6 Calculation of Eigenvectors by Inverse Iterations . . . . .	294
6.7 Calculation of Invariant Subspace by Eigenvalue Reordering . . . . .	298
6.8 Special Algorithms for Symmetric Tri-diagonal Matrix . . . . .	301
6.8.1 Eigenvalues by Bisection . . . . .	301
6.8.2 A Divide and Conquer Algorithm . . . . .	303
6.9 Algorithms for Symmetrical Positive Definite $\mathbf{Ax} = \lambda \mathbf{Bx}$ . . . . .	308
6.10 Algorithms for Unsymmetrical $\mathbf{Ax} = \lambda \mathbf{Bx}$ . . . . .	312
6.10.1 Hessenberg-Triangular Reduction . . . . .	312
6.10.2 Deflation . . . . .	312

6.10.3 Shift . . . . .	313
6.10.4 MATLAB Implementation of QZ Algorithm . . . . .	314
6.11 Algorithms for Symmetric Positive Indefinite $\mathbf{Ax} = \lambda\mathbf{Bx}$ . . . . .	317
6.11.1 A GJR Iteration Step for a Tri-diagonal and Sign Pair . . . . .	317
6.11.2 Deflation . . . . .	319
6.11.3 Shift . . . . .	319
6.11.4 MATLAB Implementations of GJR Iterations Algorithms . . . . .	320
<b>7 Iterative Algorithms of Solution of Eigenvalue Problem</b>	<b>325</b>
7.1 General Methodology of Iterative Eigenvalue Algorithms . . . . .	326
7.1.1 Basic Ideas . . . . .	326
7.1.2 Two Ways to Approximate Dominant Invariant Subspace . . . . .	330
7.1.3 Shift and Inverse to Approximate Non-dominant Invariant Subspace . . . . .	330
7.1.4 Better Approximating an Invariant Subspace . . . . .	330
7.2 Power Iterations and Subspace Iterations for $\mathbf{Ax} = \lambda\mathbf{x}$ . . . . .	331
7.3 Lanczos Iterations for $\mathbf{Ax} = \lambda\mathbf{x}$ of a Symmetric Matrix . . . . .	334
7.3.1 Basic Lanczos Algorithm . . . . .	334
7.3.2 Orthogonality of $\mathbf{U}$ . . . . .	334
7.3.3 Implicit Restart for a Better Approximate Invariant Subspace . . . . .	337
7.3.4 Purging of Converged Undesired Eigenvectors . . . . .	340
7.3.5 Locking of Converged Desired Eigenvectors . . . . .	343
7.3.6 MATLAB Implementation of Lanczos Algorithm . . . . .	343
7.4 Arnoldi Iterations for $\mathbf{Ax} = \lambda\mathbf{x}$ of a Unsymmetric Matrix . . . . .	348
7.4.1 Basic Arnoldi Algorithm . . . . .	348
7.4.2 Orthogonality of $\mathbf{Q}$ . . . . .	349
7.4.3 Implicit Restart for a Better Approximate Invariant Subspace . . . . .	349
7.4.4 Purging of Converged Undesired Eigenvectors . . . . .	349
7.4.5 Locking of Converged Desired Eigenvectors . . . . .	350
7.4.6 MATLAB Implementation of Arnoldi Algorithm . . . . .	350
7.5 Other Important Topics . . . . .	355
7.5.1 Iterative Algorithms of Generalized Eigenvalue Problems . . . . .	355
7.5.2 Nonlinear Eigenvalue Problems . . . . .	358
7.5.3 Jacobi-Davidson's Method . . . . .	359
<b>8 Algorithms of Solution of Singular Value Decomposition</b>	<b>361</b>
8.1 Introduction of SVD and Its Algorithms . . . . .	362
8.2 SVD Algorithms of a Matrix of $1 \times n$ or $m \times 1$ or $2 \times 2$ . . . . .	363
8.3 Jacobi Iteration Algorithm for SVD . . . . .	366
8.4 QR Iteration Algorithm for SVD . . . . .	368
8.5 Special SVD Algorithms of Bi-Diagonal Matrix . . . . .	373
8.5.1 SVD by Bisection . . . . .	373
8.5.2 A Divide and Conquer Algorithm . . . . .	375
8.6 Lanczos Algorithm for SVD . . . . .	379
